PROFILE

Data Engineer specialized in pipeline development and data modeling, including advanced analytics and decision support. Experience covering the full data lifecycle, from data ingestion to analytical use, visualization and Business Intelligence.

PROFESSIONAL EXPERIENCE

Departmental Council of Seine-Saint-Denis - IT Department

2023 - Present

Apprentice Data Engineer

Paris, France

• Social Portrait – Seine-Saint-Denis

- Development of a decision-support tool for the analysis of socio-economic indicators used by institutional partners (CAF)
- Design of a multi-source ETL pipeline and Data Warehouse modeling, including creation of analytical indicators and development of Power BI dashboards for territorial comparative analysis

• Third-Party Assessment (Sapin II Law)

- Development of a decision-support tool for supplier risk analysis compliant with Sapin II regulations, used by the General Inspectorate
- Design of an ETL pipeline (Talend / Qlik Cloud) on internal data and implementation of a business scoring model for risk assessment and anticipation, with Power BI dashboards supporting decision-making

• PCH Datamart Redesign

- Takeover of a project involving the development of a datamart dedicated to the Disability Compensation Benefit (PCH)
- Optimization and stabilization of a Talend ETL pipeline, SQL query optimization, and redesign of the data model to improve consistency and processing performance

• Talend Pipeline Monitoring (ELK Stack)

- Development of a monitoring solution used by the data team to supervise Talend pipelines in production
- Centralization and indexing of Talend logs in Elasticsearch via a standardized joblet, with Kibana dashboards for monitoring executions, errors, and pipeline performance

• Data Migration & Automation

- Migration of data from Oracle to PostgreSQL
- Automation of data exports and secure file transfers for external partners

ACADEMIC PROJECTS

Insect Classification using Machine Learning

- Development of an image classification model to identify different insect species (bees, bumblebees, others)
- Feature extraction (shape, LBP texture, color) and deployment of a Scikit-learn model via a FastAPI API with a Gradio interface

Automated Data Pipeline – Job Market

- Automated data pipeline for job market analysis based on multi-source public datasets
- API ingestion, data integration and enrichment, Airflow orchestration, and visualization of market trends using Kibana

CI/CD DevOps

- CI/CD pipeline using Jenkins, Docker containerization, Kubernetes orchestration, and monitoring with Prometheus/Grafana

EDUCATION

ISEP – Engineering School of Digital Technologies, Paris

2023 – 2026

Engineering Degree in Computer Science – Data specialization

Big Data, Machine Learning, Advanced Databases, Business Intelligence

Turgot High School, Paris

2021 – 2023

Scientific preparatory classes (PCSI-PC)

TECHNICAL SKILLS

Data Processing

Data Pipelines, ETL/ELT, Data Preparation, Talend

Data Architecture

Data Modeling, ODS, Data Warehouse, Data Lake, Lakehouse

Machine Learning

Classification, Regression, Clustering, Dimensionality Reduction

Big Data & Cloud

Spark, Airflow, Kafka, Databricks, Azure, Talend Cloud, Qlik Cloud

Programming

Python, SQL, Java

Data Visualization

Power BI, QlikView, Kibana, Grafana, Matplotlib

DataOps & DevOps

Docker, Kubernetes, Jenkins, ELK Stack, Git, Linux

Databases

PostgreSQL, Oracle, MySQL, NoSQL
